3Q - Streaming simplified.

Since 2009, 3Q has operated a reliable, scalable and secure video hosting and streaming technology solution that enables companies of all sizes to manage audiovisual content and distribute it to their streaming and video-on-demand channels via a central solution.

With the video platform, companies can centrally control their streaming channels from one solution and provide their content via their own website and apps or play it on the channels that are relevant to them: live and on-demand.

Simple and intuitive, with a single API and GUI, the platform is easy to connect to other software solutions and is technically modular.

With a user-friendly and easy-to-use interface, users can start streaming in no time. The 3Q video platform supports the redundant delivery of video signals with all common hardware or software encoders.

3Q – Streaming simplified.

3Q promises the highest quality video streaming with the latest CDN technology. A reliable premium network guarantees a smooth streaming experience, the multi-CDN capability enables global content delivery and with eCDN technology, companies have access to an efficient solution for delivering video content within their own corporate network.
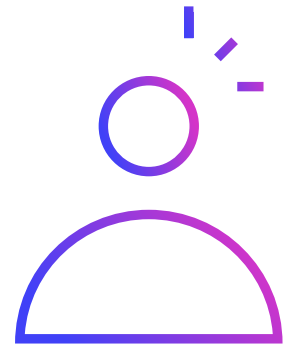

Secure and reliable data storage, no dependence on third parties, own software and infrastructure in Europe and 100% GDPR compliance are advantages that companies based in Europe in particular appreciate.

As one of the leading streaming companies in Europe and as a software-as-service provider, 3Q is a partner and specialist for streaming technology and high availability with over 1,000 B2B customers across Europe.
